The FREMONT NURSERY
QUALITY NURSERY STOCK

FREMONT, OHIO
INTRODUCTION

The Freemont Nursery was established in its present location in 1858. Starting from small beginnings we have enjoyed a prosperous and steady growth from year to year. This growth has not been due to the extraordinary ambition and business ability of the owners. It has been due to the manner of doing business and the quality and reliability of our stock. Hundreds of satisfied customers have done our advertising for us, and this has been especially true in several of the large fruit growing sections. We have many large fruit growers among our customers who have been dealing with us almost yearly for fifteen, twenty and twenty-five years.

We make it a rule to look out for our customers' interest as well as our own. We never recommend a variety of fruit simply to obtain an exorbitant price for it, or dispose of a surplus of trees of that variety. We gladly advise our customers honestly to the best of our ability, regardless of the condition of our stock. This will cause the trees to do well.

We go slow on new and untried varieties, yet we are constantly testing and investigating them, keeping those which show merit and throwing out those which are found wanting.

We obtain new starts from buds and scions from bearing trees, always selecting those which are the finest in fruits every few years, and thus avoid any possibility of a mixture of varieties. This is responsible for the remarkable reliability of our stock for the nearly sixty years of our existence.

We have our own peach orchard of about 1300 trees in which we have about 50 varieties from which to renew our stock in buds whenever we desire.

We have a great variation of soil ranging from rich sandy loam to a heavy black loam which enables us to grow a great variety of stock. We do not claim to have the largest nursery in the country. And we do not desire to have, but do claim to have one of the best, and as large a one as it is practicable to have and at the same time give our personal supervision thereof. In the nursery business more than in any other line it is possible to have so much to do that it cannot be done well. A little neglect at the right time may injure an entire block of trees or ruin an entire shipment.

We know that thousands of mistakes are made and thousands of trees spoiled every year by the trusting of important branches of the business to careless and incompetent help. We might mention many trees grow every year for both the wholesale and retail trade several hundred thousand trees.

It is our ambition to serve our customers and look after their interest ahead of our own and give them the best value for their money.

Our prices are as low as it is possible to grow stock of good quality for. We do not claim to sell cheaper than anyone else, but do claim that considering the quality of the stock and the personal care and supervision given in the growing and handling of the same, tins insuring stock true to name and in good condition, that our stock is as cheap as any and it is not cheaper at the end.

INSPECTION—Our nursery is inspected every year by the State Officials, original certificate of inspection is on file at the nursery and copies are placed on all shipments.

CARE—We exercise the greatest care in the digging and handling of our stock and guarantee all shipments to reach destination in good condition.

A new frost proof storage cellar, 129 by 49, 2 stories in height, gives us largely increased facilities for storing the trees in Winter and the early handling in the Spring.

ERRORS—Should be reported immediately on receipt of goods. And if so done, all errors on our part will be cheerfully rectified. Order early and insure getting the varieties wanted, but always state whether, in case we should be out of any variety wanted, we should use a similar and equally as good a variety ripening at the same time or omit.

SHIPPING SEASON—Usually begins about April 15th and continues till ground freezes.

NOMENCLATURE—In this catalogue we have endeavored to conform to the revised and improved form of names of varieties adopted by the American Pomological Society and indorsed by the Ohio and other Pomological Societies. We are always glad to help you in the planning of your orchard, the selection of your varieties, or the planting and planting of your yard for ornamental purposes. Be free to call upon us.

PREPARING THE SOIL—Fruit trees flourish best in a naturally dry soil; too much moisture retards growth. Plow at least twice, following the common plow the second time with the subsoil plow. Fresh lands will not need manure or fertilizer but land exhausted should be fertilized either by turning under clover or well decomposed manure or compost. Land that is in good condition for wheat, corn or potatoes will be well adapted to fruit trees.

PLANTING—Dig the hole larger than is necessary to admit all the roots in their natural position, keeping the surface soil and subsoil separate. Have the trees held in an upright position while the earth is shoveled in, the best soil in among the roots. Make sure that all the roots come in contact with the soil. When the earth is nearly filled in, pull it as far as possible, brush the dirt around the roots; then fill up the remainder and tread down gently with the foot. It is only necessary to use water in dry weather.

Don't plant too deep; the trees should stand about the way they did in the nursery. Trees on dwarf stock should be planted so that all the stock is below the ground, only the graft appearing above the surface.

BRAZING—Extra tall trees or those exposed to the wind should be supported by a stake. Take care that no chaffing of the tender bark occurs.

PRUNING—Both root and top should be pruned at time of planting and before the tree is set in the ground. First cut off the ends of the broken and bruised roots with a sharp pruning knife, then brush the dirt off the under side. This will cause the wound to heal over readily, by throwing out plenty of fibrous roots at the end. Then cut back each branch or side limb to a bud not more than four or five inches from the body. Then cut back the leader or central limb so as to leave it about four or five inches above the high end. Then when the side limbs the tree should be headed back so that they form a proper head.

None of the lower limbs should be cut off entirely, as it is best to form the heads as low as possible, so that the limbs and leaves will protect the trunk from the direct rays of the sun.
APPLES, THE KING OF FRUITS

The apple is universally recognized as the most desirable fruit of the United States, because of its great varieties of delicious flavors, nutritious qualities and nutrative value. Whether as commercial crop or for the satisfaction of the family, a well selected orchard of a few varieties is a most desirable investment that any land owner can place on his premises.

We recommend the planting of a few thrifty trees from one to three years old and from four to six feet high as such are more safely handled than older and larger trees.

**SUMMER APPLES**

**EARLY HARVEST**—Medium to large; roundish, pale yellow; flesh white, tender, juicy, crisp, with a rich sub-acid flavor; fine. Tree moderate grower, erect; very productive. Middle of August. One of the very best early varieties.

**GOLDEN SWEET**—Large, pale yellow, very sweet and productive. Tree strong branching grower. August and September.

**RED ASTRACHAN**—Large; roundish; nearly covered with deep crimson, overspread with a thick bloom; very handsome; jicy, good, rather acid. Tree of the hardiest, vigorous and a good bearer. August.

**SWEET BOUGH** (Large Yellow Bough)—Large, pale yellow; very tender, crisp, juicy, sweet, fine. Tree a moderate grower, good bearer, but not as prolific as Golden Sweet, but of finer quality. August.

**YELLOW TRANSPARENT**—A Russian apple. The tree is hardy as the crab, a good upright grower; a very abundant, regular and early bearer; the fruit full medium size; color a rich, transparent lemon-yellow, with a faint blush on sunny side; flesh melting, juicy, pleasant, sub-acid. A few days earlier than the Early Harvest and is the earliest ripening apple known.

**AUTUMN APPLES**

**FAMEUSE** (Snow Apple)—Medium, roundish; deep crimson. Very handsome; flesh snowy white, tender, melting, juicy, high flavored, sub-acid, delicious. Tree moderate grower, very hardy and productive. November to January.

**OLDENBURG**—A Russian apple. Large, yellow, streaked with red, and somewhat blushed; flesh juicy and good, sub-acid. Tree a vigorous grower, and a young and abundant bearer. One of the Ironclads, so hardy that it succeeds where most other varieties fail. August and September.

**MAIDEN BLUSH**—Large, flat, smooth regular, with fine, even shaded, red cheek or blush on pale yellow ground; flesh white, tender, sprightly, with pleasant sub-acid flavor; tree erect, vigorous and a regular and abundant bearer. September and October.

**WEALTHY**—Medium roundish; skin smooth, oily, whitish yellow, mostly covered with dark red; flesh white, fine, juicy, vinous, sub-acid, very good; one of the best and finest apples grown; tree vigorous, extremely hardy, one of the Ironclads, a very early and abundant bearer. Deserves the widest cultivation. September to January here, but keeps much longer in the north, sometimes till the following spring. Also Fall Pippin, Munson and Pumpkin Sweet.
WINTER APPLES

BANANA (Winter Banana)—New, excellent. The name is most appropriate, as it has a delightful banana perfume. Fruit keeps well till spring; the color is a striking red blush on a deep yellow ground. It is of large size and very showy in appearance, roundish, inclining to conical; stalks three-fourths of an inch long, cavity moderate, apex shallow. Originated in Indiana.

BALDWIN—Large, roundish; skin deep red, flesh juicy, crisp, sub-acid; good flavor; tree very vigorous, upright and productive; one of the most popular and profitable winter varieties. December to March.

BEN DAVIS—Large, handsome, striped, and of fair quality; mild, sub-acid. Tree very hardy, a vigorous grower, constant, abundant bearer; highly esteemed as one of the most profitable market sorts. December to March.

BLACK BEN (Reagan’s Red)—Improved Ben Davis. Said to be much more handsome apple, being a solid dark red color, and of better quality, succeeding everywhere and keeping as long as Ben Davis.

DELICIOUS—Claimed by the introducers to be “the best apple in the world.” They claim for it, good size, beautiful dark red color, and incomparable in flavor. Nearly sweet with a very slight touch of acid and very aromatic. A long keeper. A strong, hardy tree and a sure bearer. One of the most popular market sorts.

FALLAWATER (Tulpehocken, Pound, etc.)—A very large, round; yellowish green with dull red cheeks; tender and juicy, crisp, pleasant, peculiar sub-acid flavor; tree a vigorous grower, very productive even while young. Nov. to March.

GANO—Originated in Missouri. Form conical, good size and smooth; deep red shaded on sunny side to mahogany; very attractive; flesh pale yellow, fine grained, tender, pleasant; mild sub-acid; is a good shipper and keeper; tree healthy, vigorous and hardy. An annual and prolific bearer called an improved Ben Davis, and by many leading horticulturists said to be identical with Black Ben Davis.

GRIMES GOLDEN—Medium size, golden yellow; tender, rich sub-acid flavor. It is an early winter apple but keeps until February without losing any of its crispness or rich flavor. It is a fine eating apple and splendid cooker. Tree a moderate grower; very hardy and productive; makes a good filler a sit begins bearing young.

HUEBARDSON—Large, round; beautiful yellow, striped and splashed with red; flesh tender, juicy and fine, with agreeable rich flavor hard to distinguish between sweetness and acidity; tree vigorous; bears large crops. November to January.

JONATHAN—Medium size; red and yellow; flesh tender, juicy and rich; a moderate grower; shoots light-colored, slender and spreading; very productive. One of the best varieties for either table or market. November to March.

M’INTOSH—Origin, Ontario. Season December and January. A choice variety of the Fameuse type. Tree vigorous with spreading head; a good annual bearer. Fruit above medium to large, highly perfumed; smooth polished yellow, almost covered with brilliant solid crimson, a beautiful fruit; flesh snow white, crisp, very tender, sprightly aromatic, sub-acid, good quality.

NORTHERN SPY—Large, roundish, slightly conical, somewhat ribbed; quite covered on the sunny side with dark crimson, and having a pale bloom; flesh white, tender, juicy, spicy, high flavored and delicious, sub-acid; retaining freshness of appearance and flavor until June. Tree is a remarkably vigorous erect grower, and a great bearer. Requires thinning of the head to admit light and air freely to the fruit. Both leaf and blossom buds open a week later than other varieties. January to June.

NORTHERN NURSERY, FREMONT, OHIO
CRAB APPLES

An unequaled fruit for cider and vinegar. The trees are noted for their hardiness and vigor and usually bear second year after planting. They are delicious for cooking, preserving, drying and jellies. Valuable for planting for ornaments and windbreaks and the fruit is of commercial importance on city markets. Your orchard is not complete without a few Crabs. Excellently adapted to the yard.

HYSLOP—Almost as large as Early Strawberry apple; deep crimson; very popular on account of its large size, beauty and hardiness. Vigorous. October to January.

TRANSCENDENT—Skin yellow, striped with red; flesh crisp and juicy. An early and heavy bearer. One of the best known varieties. Vigorous. September to October.

WHITNEY—Large, glossy green, striped, splashed with carmine; flesh firm, juicy and flavor very pleasant; ripe late part of August. Tree a great bearer and very hardy; a vigorous, handsome grower, with a dark green, glossy foliage. Vigorous. August.

Crab apples are especially desirable in the colder sections as only a few varieties of apples can be successfully grown.

RHODE ISLAND GREENING—Large, roundish; green or greenish yellow; tender, juicy and rich; rather acid, but high flavored and one of the best for cooking and dessert; tree vigorous, spreading, very crooked grower in the nursery; a great and constant bearer nearly everywhere. Toward the south ripens in the fall, but in the north late December.

ROME BEAUTY—Large; yellow and bright red; flesh yellowish, tender, juicy, sub-acid; tree moderate grower, good bearer. December to March.

STARK—Large, roundish, greenish yellow shaded, sprinkled and striped with light and dark red nearly over the whole surface. and thickly sprinkled with light brown dots; flesh yellowish, moderately juicy, mild, sub-acid; tree vigorous, an early and abundant bearer, hardy; the fruit a long keeper and valuable market fruit. January to April.

STAYMAN—Kansas origin. Oblate, conical, medium large; green, yellow and red striped; flesh yellow, fine, tender, juicy, rich, mild, acid; very good at best; valuable for dessert and market. Season very late.

SUTTON—Medium to large, roundish; handsome when yellow, shaded mottled, and obscurely striped with fine crimson; flesh whitish, crisp, tender, juicy, slightly sub-acid; quality fine; late keeper; tree a vigorous, handsome grower and productive. One of the most valuable market varieties. November to February.

TOLMAN (Tolman’s Sweet)—Medium size; pale yellow, slightly tinged with red; firm, rich and sweet; excellent for cooking; tree vigorous, very hardy and productive. November to April.

TOMPKIN’S KING—Largest size, oblate, yellowish ground striped and covered with bright red; fragrant, spicy smelling; flesh very crisp, tender, rich, fine flavor.

WAGENER—Medium to large; light yellow covered with deep red in the sun; firm, crisp, juicy, sub-acid; tree vigorous, upright, handsome, very productive. December to May.

YORK IMPERIAL—Medium; white shaded with crimson; flesh firm, crisp, juicy, pleasant, mild, sub-acid; tree vigorous, a good bearer. A popular Pennsylvania variety. November to Feb. Also Arkansas Black, Golden Russet, Chenango, Greenville, Opalectic, Pewaukee, Roxbury, Salomo, Esopus (Spitzenburg), Westfield (Seek-no-Further), Winesap, Wolf River, Yellow Newton, Yellow Belleflower, Domini, etc.
CHOICE QUALITY PEARS

The pear succeeds on most soils but does best on a rather heavy loam. Budded on its own stock it makes what is called a Standard tree; but on Quince stock it makes Dwarf. Standards are best adapted to large permanent orchards; but dwarfs will come into bearing very much sooner and may be planted much closer together. Dwarf must always be planted sufficiently deep to cover the quince stock two or three inches.

KIEFFER—Very large, bell shaped; light yellow when fully ripe, sometimes with a slight blush; flesh white, crisp, juicy, of slightly quince flavor; of fair quality; exceedingly valuable for cooking or canning, which brings out its best spicy flavor; never rots at core. The tree is an extraordinary vigorous grower, and must be severely pruned. It is a wonderfully abundant and regular bearer, and the fruit must be thinned for the best results. Extremely vigorous. October to December.

SECKEL—Small; skin rich yellowish brown with a deep brownish red cheek; flesh very fine grained, sweet, exceedingly juicy, melting, buttery; the richest and highest flavored pear known. Moderate. September and October.

SHELDON—Large size; yellow or greenish russet, with a richly shaded cheek; flesh a little coarse, juicy, a very brisk, vinous, highly perfumed flavor; productive; vigorous. October.

DWARF PEARS

As certain varieties of Pears are not successful when grown as Dwarfs, we herewith give a special list of such as are most suitable, and of which the Duchess d' Angouleme is decidedly the best of all; Anjou, Clapp's Favorite, Angouleme (Duchess), Kieffer, Louise, Lawrence and Seckel.

SUMMER PEARS

BARTLETT—Large size, with often a beautiful blush next the sun; buttery, very juicy and high flavored; bears early and abundantly; very popular. Vigorous. August and September.

CLAPP'S FAVORITE—Very large; yellowish green to full yellow when ripe, marbled with dull red in the sun and covered with small russet specks; vinous, melting and rich. Should be gathered early. Vigorous. August.

EARLY WILDER—Medium or rather small, regular in form; greenish yellow with a brownish red cheek; handsome, melting, sweet, pleasant, very good; tree a vigorous grower and great bearer. First of August.

AUTUMN PEARS

ANJOU—Large, greenish, sprinkled with russet, sometimes shaded with dull crimson; flesh whitish, buttery, melting, with a high, rich, vinous, excellent flavor; very productive; succeeds well on the quince; should be in every orchard. Vigorous. October to December.

ANGOULEME (Duchess)—Very large, dull greenish yellow, streaked and spotted with russet; flesh white, buttery and very juicy with a rich and very excellent flavor. Vigorous. October and November.

CLAIRGEAU—Large; skin yellow, inclined to fawn; shaded with orange and crimson, covered with russet dots; flesh yellow, buttery, juicy, somewhat granular with a sugary, perfumed, vinous flavor. Moderate. October to December.

FLEMISH—Large and beautiful, juicy, melting, rich and fine; a good bearer; hardly everywhere. Vigorous. September and October.
CHOICE PLUMS

Plums have a distinctive flavor from any other fruit and are especially fine for eating fresh for jellies preserves and unexceded for canning for desserts. Plum trees require no more care than the pear or peach and thrive well under ordinary conditions, however, they do best in a cool, not too dry a place and in good rich soil. Do well planted in poultry yards. The Curculio can be destroyed by spraying with three ounces of Paris Green to 40 gallons of water.

ABUNDANCE—One of the best Japan Plums. The tree is a very rapid grower, healthy in limb and foliage, comes into bearing remarkably young, and yields abundantly. The fruit is full medium size, color a rich cherry red, with a distinct bloom, highly perfumed; flesh light yellow, very juicy and tender, and of excellent quality. Vigorous. Last of July.

ARCTIC (Moore's)—Fruit grows in large clusters, dark purple; flavor very fine both for preserving and dessert. Long keeper. Vigorous. September.

BRADSHAW—Fruit very large, dark violet red; flesh yellowish green; juicy and pleasant; very productive. One of the most profitable for market. Comes at a good season, of fine appearance and brings a good price. Vigorous. Middle of August.

BURBANK—A valuable Japanese Plum, cherry red with a thin lilac bloom; flesh a deep yellow; very sweet, with a peculiar and very agreeable flavor. The tree is a vigorous grower. August.

FELLENBURG (Italian Prune)—Medium large; purplish-black; blue bloom; tree; flesh greenish-yellow, juicy, sweet and of good quality; will hang on tree after ripening; splendid for drying and market. Tree very productive. September.

GEUII—Fruit very large; deep bluish purple, covered with thick bloom; flesh yellowish green; course, sweet and pleasant; great bearer and very early; tree a hardy and rapid grower. One of the most profitable for market. Vigorous. First to middle of September.

GERMAN PRUNE—A valuable plum, but most esteemed for drying and preserving. Large, long oval, purple with a thick blue bloom; flesh firm, sweet and pleasant, separating from the stone. Moderate to vigorous in growth. September.

GRAND DUKE—Large; violet red, fine quality, free from rot, very productive. Tree a moderate grower. Last of September.

IMPERIAL GAGE—Fruit large, oval, skin pale green, flesh juicy, sweet, rich and excellent. Vigorous. Middle of August.

LOMBARD—Medium, roundish oval; violet red; juicy, pleasant and good; adheres to the stone; productive. A valuable market variety; one of the most hardy and popular. Nearly always produces a crop. Not liable to rot. Vigorous. Middle of August.

RED JUNE—An early ripening Japanese Plum; medium to large, roundish, conical, purplish red; handsome; flesh yellow, quality good.

REINE CLAUDE—Large, nearly round; pale yellow, marked with red; juicy, melting and excellent, good bearer. Not liable to rot. One of the most profitable for market. Vigorous. First of September.

SHROPSHIRE—A Plum of fine quality, as free from the attacks of the Curculio as the Common Damson and of same color. The flesh is amber colored, juicy and sprightly. Not liable to rot. Free. September.

WICKSON—Very large, reddish-purple, with white bloom; cling; flesh firm and meaty; yellow, rich, aromatic; a market sort. Tree strong and spreading; bears abundantly and early, in most localities. August.

YELLOW EGG—Very large, egg-shaped; excellent for cooking; good and productive. Vigorous. Last of August.
CHERRIES OF QUALITY

Mazzard root for Sweet Cherry. We are one of the few who can supply them. Do you remember years ago that the old time Sweet Cherry trees did so much better than they do now? Have you heard fruit growers wonder at it? Do you know the reason? It is because years ago the Sweet Cherry, in fact all cherry, were budded on Mazzard roots. Then the Mahaleb root came into vogue and its use became general because it was so much easier to bud successfully than the Mazzard. And it proved to be a better stock for the sour varieties, but not so for the sweets. Yet it was adopted almost universally as a stock for the Cherry, both sweet and sour and that practice is in use today in almost all the nurseries of the country. A Sweet Cherry tree can be produced much cheaper on a Mahaleb root than on a Mazzard but it is not worth one-fourth as much. We have made a practice to grow a limited number of Sweet Cherry on Mazzard roots each year for the benefit of our customers who wanted them. If you wish them you must specify Mazzard roots and send in your order early, and observe that we cannot furnish them at the same price as we ask for ordinary Sweet Cherries which are on Mahaleb roots.

The Cherry thrives best on a dry, sandy or gravelly soil, and there attains its highest perfection, but will do well in almost an situation except a wet one. We divide them into two classes: (1) Hearts and Bigarreaus; (2) Dukes and Morellos. The former are strong and vigorous growers, making large, open, spreading heads; their fruit is large, heart shaped, meaty and sweet. The Dukes and Morellos do not attain so large size, but are more hardy and less liable to injury from bursting the bark; their fruit is acid or sub-acid.

HEART AND BIGARREAU Cherries

**BING**—Originated in Oregon. The fruit is very large, dark brown turning to black when ripe and of the finest quality. One of the largest and most delicious sweet cherries grown. Tree strong, stocky, thrifty grower with heavy foliage. Should be followed by Lambert which ripens later.

**LAMBERT**—Another of the best sweet sorts, originating in Oregon. Dark purplish red turning to jet black when ripe. Extra large, flesh firm and rich. Tree a strong grower, hardy and very productive. A splendid sort to follow Bing.

**NAPOLEON**—Very large, pale yellow or red; very firm, juicy and sweet; very productive; one of the best. Vigorous. First of July.

**SCHMIDT**—Remarkably hardy and productive. Fruit grows in clusters and of the largest size; a deep black color; flesh dark, tender, juicy, with a fine rich flavor. Tree hardy. Vigorous. July. We consider this the best all around Black Sweet Cherry.

**SPANISH**—Large, pale yellow, with red cheek; firm, juicy and excellent; one of the best light colored cherries; productive. Free. Last of June.

**TARTARIAN**—Very large, bright purplish black; half tender, juicy, very rich, excellent flavor; productive. Free. First to middle of July.

**WINDSOR**—Fruit large, liver colored, resembling the Elk-horn, ripening a few days after that variety; flesh remarkably firm, of fine quality. Tree hardy and prolific. Vigorous. Middle of July.

**WOOD** (Gov. Wood)—One of the best cherries; very large; light yellow marbled with red; juicy, rich and delicious. Tree healthy and great bearer. Hangs well on the tree. Vigorous. Last of June.

**DUKE AND MORELLO Cherries**

**DYEHOUSE**—A very early and sure bearer; ripens a week before Early Richmond. June.

**EARLY RICHMOND**—Medium size; dark red; melting, juicy, sprightly acid flavor. This is one of the most valuable and popular of the acid cherries, is unsurpassed for cooking purposes, and is exceedingly productive. Free. June.

**LAGE MONTMORENCY**—A large, red, acid cherry, larger than Early Richmond and fully ten days later. Very profitable. Early Richmond hands in clusters and is more liable to rot. Free. Last of June.

**MORELLO** (English Morello)—Medium to large; blackish red; rich, acid, juicy and good; very productive. Moderate. August.

**MAY DUKE**—Large, dark red, juicy and rich; an old, excellent variety; productive. Free. Middle of June.
DELICIOUS PEACHES

The Peach requires a well drained moderately rich soil. Warm, sandy loam is considered the most ideal, but hundreds of the best orchards in the Ohio peach belt are to five quarts of fine berries to a picking, three times a week, beginning the fore part for home use or market, and varieties that will produce fruit and lots of it and trees that will stand the most severe winters, and bear when others fail, we have them in the following seven varieties of Special Mention.

VARIEDIES OF SPECIAL MENTION

These with the exception of the Hale and Wilma were introduced by us, some of them over 20 years ago, and are varieties of local origin here in the peach belt of Northern Ohio. They have stood the test of time both in commercial orchards as well as in small home orchards, and have given the greatest of results whenever we have sold them. They have far surpassed our expectations and our claims for them.

We recommend these for extreme hardiness both of tree and in bud. For fine quality and for being extra heavy and sure bearers. Fully as hardy, even if not more so, as Crosby or Golddrop, just as heavy bearers and as good flavor, and much larger.

In 1915 we saw several orchards of several hundred trees each in the Ohio peach belt, of Day's Nonpareil, loaded to the ground with highly colored fruit, and the size of the latter was a surprise, even to us. A large per cent would grade AA, and the balance A, and in one orchard of about 100 trees, which were heavily loaded last year, and as a consequence not quite as full this year, almost every peach would grade extra fancy, and was as large as any Elberta the grower had had. They were on good ground and well cared for. The grower had, however, set two rows of them next to his Elberta orchard on the side toward a swamp for the reason that they would stand the lower and heavier soil better than Elberta or most anything else.

In another orchard of several thousand trees, just at the close of the Elberta season, when someone wanted a real good peach to eat, the owner told him that he could go over to his Heidelburg orchard, where they had finished picking some ten days before and see if we could find a stray peach still left as he said whenever he wanted a good peach to eat for himself he always took a Heidelburg if he could get it, and that he considered it the best flavored peach that he had ever grown. And the richest, when canned.

We cannot recommend these varieties too highly. If you want varieties that will bear when most others fail, trees that will stand the winters, trees that will do well on heavy soil, that will produce fruit, and lots of it, and of good size do not fail to plant them.

DAY—A heavy, bearer of the very finest peaches, and a very hardy tree; yellow freestone and colors up well on the tree. Originated in our orchard. One large peach grower says: "I would rather lose any other variety in my orchard than the Day's Nonpareil." Good size, but should be thinned for market growing. Ripens between Late Crawford and Smock.

J. H. HALE—This is the new variety advertised so extensively and sold in immense numbers throughout the country in the last three years. Claimed to be a few days earlier than Elberta, larger, and better, and just as good a bearer as that variety. We offer fine trees at an ordinary price.

HEIDELBURG—The peach par-excellence for home use; yellow freestone of good size; delicious flavor and small pit; hardy tree and heavy bearer. A splendid market variety and stands shipping well. Ripens just after Early Crawford.

SALBERTA—Is a Salway-Elberta cross grown from an Elberta pit. A large yellow freestone of the finest quality ripening about three weeks after Elberta. In a letter received from the originator written October 4, 1916, Mr. Kofkar states that he was picking the Elberta then. The variety is also very hardy in bud. This variety gives us a continuation of the Elberta season, and ripens at the same time as Smock, and has proved to be a heavy and sure bearer. In our opinion it is destined to take the place entirely of the Smock as a commercial variety.
WILMA—A late Elberta introduced by Mr. Rofkar of Catavina Island, Ohio, a few years ago and now bearing in that section in many orchards. It is a large yellow freestone, highly colored, and more prolific than its parent Elberta, and about ten days later in ripening. It also starts growth a little earlier in the spring than other varieties.

WINSTONE—A seedling of Late Crawford which it resembles in every way, but tree is much hardier. During the severe winter of 1904 we had a tree of Winstone and one of Late Crawford standing side by side in a small test orchard. The latter tree was killed completely, but the Winstone, a few feet away was uninjured and bore fruit the following season. This was also true of the Heidelburg and Day’s Nonpareil while many of the old varieties such as Elberta, Crawford’s Early and Late and others were entirely killed.

One customer writes us, after trying to get an orchard of Day and Winstone for several years, but putting off ordering each time till the trees were sold out to send him all the trees of those varieties we had left (which was several hundred at that time) because he says that he wants trees that will produce peaches and is tired of planting the ordinary varieties which do not bear every year. He says that although these sorts bear so heavy and are consequently not so large that he makes more money out of them than from anything else he has, because he can count on a crop every year.

**LEADING PEACH VARIETIES**

ALEXANDER—Medium, greenish white, nearly covered with rich red; melting, juicy sort. July.

BANNER—A Canadian origination; one of the most profitable varieties ever produced. Fruit large, round and very handsome. Tree hardy and an abundant bearer. Season October first.

BARNARD—Medium to large; yellow, cheek purplish red; flesh yellow, red at the stone; juicy, sweet, rich. One of the best yellow fleshed peaches. Freestone. Said to be nearly the same as Yellow Honest John and Yellow Alberge. First to middle of September.

CARMEN—Large, resembles Elberta in shape; color creamy white or pale yellow with deep blush; skin very tough, flesh tender, fine flavor and quite juicy. Ripens with Early Rivers. Promises to stand at the head for a general long distance, profitable market variety, in quality ranking superior to anything ripening at same time. August.

CHAMPION—A large handsome early variety; creamy white with red cheek, sweet, rich and juicy. Hardy and productive. August.

DEWEY—It is a perfect freestone; flesh yellow, of uniform color and texture to the pit. Hardy and productive. Tree is strong, symmetrical grower, and as near perfection as we can obtain in a single variety. Early August.

EARLY CRAWFORD—This very beautiful and best of yellow peaches is highly esteemed for market purposes. Fruit very large, oblong; skin yellow, sweet and excellent. Wonderfully productive and hardy. Freestone. Last of August.

ENGLE—Large, yellow; resembles Late Crawford, more productive and later. October.

ELBERTA—A seedling of Chinese Cling but entirely free. Large, yellow with red cheek, juicy and of high quality; flesh yellow and melting. A very valuable sort. Ripens after Early Crawford. Freestone.

FITZGERALD—An improved Early Crawford, being fully equal to it in size, quality and color. Tree commences bearing young, is productive and one of the hardiest. Fruit large; brilliant color, bright yellow, suffused with red; flesh deep yellow, best quality. Early September.
QUINCES

In quinces we have a very desirable fruit. It is used a great deal for preserves and canning especially with other fruits. A small part of quince will impart the quince flavor to three or four times as many apples. Quince syrup is very delicious, even excelling the finest maple syrup.

BOUGEAH—Tree a remarkably strong grower, surpassing all others, yielding immense crops. Fruit of large size, round; rich golden color; smooth; very tender when cooked; has been kept till February in good condition.

CHAMPION—A prolific and constant bearer, fruit averaging larger than the Orange, quality equally fine, and a long keeper; bears extremely young. Ripens late.

MEECH—A vigorous grower and immensely productive. The fruit is large, lively orange yellow, of great beauty and delightful fragrance; its cooking qualities are unsurpassed.

ORANGE (Apple)—Fruit large, round, with a short neck; color bright yellow; flesh firm and tough until cooked, when it becomes tender, juicy and of excellent flavor. We recommend the Orange as the best all round variety to plant.

LEMON CLING—Large, pale yellow, dark red cheek; hardy and productive. September.

LEMON FREE—Lemon color and shape; large and very large if thinned on the tree; immensely productive and a very hardy tree. Especially esteemed and sought for by canning factories as it holds together well when canned. Last of September.

NEW PROLIFIC—Large, attractive, firm; flesh yellow, fine flavor; hardy and productive. September.

REYNOLDS (Melocooten or Reynold's No. 1)—Of local origin but one of the best; yellow red cheek; good size and large if fruit is thinned; heavy bearer and hardy tree. Ripens nearly with Elberta.

SALWAY—Fruit large, roundish; deep yellow, with a rich marbled brownish red cheek; flesh yellow, juicy, rich and sugary. A new English variety, a good keeper and promising highly as a late showy market sort. Freestone. First of October. Too late in the north except near large bodies of water.

SMOCK FREE—The old strain of Smock, not as large as the Beers Smock but a much heavier bearer. Last of September.

SMOCK (Beers)—An improved strain of Smock, being larger than the preceding but not generally considered as heavy a bearer. We are growing several strains of this variety. One known as the Kilkens, another as Thompson, which are bearing heavily in some orchards. A leading market variety. September.

STUMP—Very large, roundish; skin white, with a bright red cheek; flesh white, juicy and good. Freestone. Last of September.

ST. JOHN—Nearly as large as Crawford, fully equal in color. Fruit round, brilliant, showy; one of the earliest yellow peaches. August. Also Crosby, Mayflower, Mt. Rose, Old Mixon Free, Slappey and others.
ALWAYS ROOM FOR GRAPES

The vines come quickly into bearing, yielding fruit usually the second year after planting, requires but little space, and when properly trained, is an ornament to the yard, garden or vineyard.

As a commercial crop there is nothing more satisfactory. They are as reliable as a corn crop, and as staple on the market as wheat. When a vineyard is once established it will be productive for a life time with ordinary care, and the income from it can be counted on almost as certainly as the changing of the season. Grapes do well on either gravelly, sandy, or a combination of these. If planted on clay soil, it must be thoroughly underdrained to secure good results.

BRIGHTON—A cross between the Concord and Diana Hamurg. It gives the best satisfaction. Bunches large, berries of medium size, dark red; flesh sweet, tender and of the highest quality. Ripens one week earlier than Delaware. First of September.

CAMPBELL’S EARLY—Clusters large and handsome; berries large; nearly round, black, with light purple bloom; flesh rather firm, but tender; seeds few and easily separated from pulp; quality rich, sweet, slightly vinous; strong vigorous grower, with healthy foliage; ripens very early; berries do not drop easily from clusters, and the fruit keeps a long time in perfection; promises to be of great value.

CATAWBA—Bunches large and loose; berries large, of coppery red color, becoming purplish when well ripened; later than Isabella; requires the most favorable soils and situations, good culture and warm seasons, to mature perfectly in Western New York. Last of September.

CONCORD—A popular variety where the choice kinds fail to ripen; universally healthy, vigorous and productive; flesh somewhat buttery, moderately juicy and sweet. Bunch large, nearly black with bloom; early. September.

DIAMOND—White; bunch large, compact, shouldered; berries large, round; skin thick; firm; flesh tender, juicy, with but little pulp. Vine a good grower with thick, healthy foliage; said to be hardy and productive. September.

MOORE—A seedling of Concord, combining the vigor, health and productiveness of Concord, and ten days earlier than Hartford. In quality hardly to be distinguished from Concord. Bunch large, berries very large, black. August.

NIAGARA—Bunch medium to large, compact, occasionally shouldered; berry large, roundish, uniform, of pale greenish color; flesh slightly pulpy, tender, sweet. Vine remarkably vigorous, healthy and productive. September.

POCKLINGTON—It is a seedling from Concord; fruit a light golden yellow, clear, juicy and sweet to the center, with little or no pulp; bunches very large, sometimes shouldered; berries round, very large and thickly set. First of September.

WORREN—Bunches large, handsome, double shouldered; berries large, sweet. Being ten days earlier than Concord, it ripens well in cold localities; vine very thrifty and vigorous, perfectly hardy and a good bearer. It is coming rapidly into repute as one of the leading sorts for general cultivation, ranking in this respect with Concord, to which it is decidedly superior in quality; black. Middle of September.

WYOMING—An early, light red grape with iron clad vine and foliage; always yielding enormous crops. It ripens with Delaware, which it resembles in appearance, although larger in bunch and berry. A valuable grape for market growing.
STRAWBERRIES

To insure best results Strawberries should be freshly dug, packed by themselves and shipped by express. We never dig them till we are ready to ship and consequently have usually had good success even when we sent them by freight along with other stock. They should always be attended to and planted at once on receipt of goods. We grow eighteen or twenty of the best varieties and our list is changing most every year. Varieties with imperfect or pistillate flowers are marked “P,” those with perfect or staminate flowers are marked “S.” Where pistillate varieties are planted, every third or fourth row should be some staminate variety that blossoms at the same time, in order to produce plenty of pollen to fertilize the imperfect flowers of the pistillate sorts.

SAMPLE—A strong plant that succeeds well on nearly all soils and yields astonishing crops of uniformly large, fine berries, pointed conical, rich scarlet, firm and of fair quality. A money-maker for the marketman and destined to become one of the standard sorts. It is being planted in immense quantities.

STEVEN'S LATE—This variety makes an abundance of strong plants with good foliage that protects blossoms and fruit from frost. They are long and uniform in size; color good red, and firm enough for shipment, as it is one of the very best to hold up after picking. Its season to ripen is about the same as Gandy.

WARFIELD (P)—The great market berry of the central and northern part of the country. Famous for its flaming color, great firmness and unsurpassed flavor. Many hotels and restaurants in the great cities advertise Warfields strongly as one of the season’s attractions, so much is for its fame for flavor and lusciousness. As a canning berry it has no superior and is a valuable shipper, comes in early and is enormously productive.

WM. BELT—Berries very large, conical, bright red, of good flavor. The plant is strong, healthy and very fruitful. Season medium to late.
Fall or Everbearing Strawberries

The Everbearing Strawberry is now past the experimental stage. We were skeptical ourselves at first and before offering them to our trade we tested them several years. Out of a number of varieties tested we found only two or three that succeeded. Two of these sorts were so far ahead of any others that we tested that we have dropped all others and will offer these two only. They are the Superb and the Progressive and the former was more satisfactory than the latter. We picked from a small bed of between 200 and 300 plants, all planted in the spring of the same season, from four to five quarts of fine berries to a picking, three times a week, beginning the fore part of August and continuing till freezing weather. The vines were covered with blossoms and green and ripe berries at all times. We believe that every one should have some of these for a novelty, but we do not believe that they will be a paying proposition commercially.

We offer plants of Superb and Progressive. Superb has averaged larger and has produced more quarts with us, while Progressive has produced more berries, but smaller and on longer, more upright stems.

MULBERRIES

The Mulberry is valuable as an ornamental shade tree and the fruit is quite popular in many sections. It is especially valuable in poultry parks.

DOWNING AND NEW AMERICAN—Are by long odds the two best varieties of Mulberries to plant for fruiting purposes. Both are very large, fine berries, black when fully ripe and continue to mature fruit for six to eight weeks in midsummer. The Downing is too tender a tree for our northern winters and we therefore recommend the New American which is much more hardy, and just as good in every way.

RUSSIAN—A valuable tree to plant for posts or timber, but fruit is usually too small to make it a desirable fruiting variety. Being a seedling, however, one is apt to find a great variation in different trees and sometimes a tree is found which produces fine fruit. It is always a valuable tree to plant near berry plantations to attract the birds from the more valuable crops of raspberries, blackberries, currants, etc.

GOOSEBERRIES

Gooseberries should be planted in good, rich soil and well manured once a year. Pick regularly, thoroughly cutting out all dead-wood and surplus branches. Plant in rows 4 feet to 6 feet apart in row. It is well to mulch heavily in the fall. Plants are hardy, rugged and easily grown.

DOWNING—Fruit larger than Houghton, roundish; light green, with distinct veins; skin smooth; flesh rather soft; juicy and very good. Vigorous and productive. The most popular variety for market growing.

Houghton—A medium sized American variety, which bears abundant and regular crops and never mildews; fruit smooth; red, tender and very good; valuable.

Josslyn (Red Jacket)—An American seedling of large size; smooth, prolific and hardy, of best quality. Has been well tested over a wide extent of territory by the side of all the leading varieties, and so far the freest from mildew, both in leaf and fruit of them all. A wonderful cropper, with bright, clean, healthy foliage.

ASPARAGUS

Conover—Very large size and of excellent quality; has superseded the old varieties. Also Columbian Mammoth White, Palmetto, etc.

RHUBARB

Myatt—Early, very large, tender and delicately flavored; requires less sugar than other sorts.
RASPBERRIES

Raspberries are one of the most delicious and popular fruits grown, are easily cultivated and require little care. Cut out old and weak roots each year. Plant in good soil in hills about four feet apart. With a little care and attention they will produce large crops of berries. In large plantings it is advisable to plant them thickly the same as hedge row.

RED AND PURPLE VARIETIES

COLUMBIAN (Purple Cap)—The Columbina is a variety of the Shaffer type; of remarkable vigor and productiveness. It is very hardy and a rank, thrifty grower; propagates from the tips, same as black caps. Fruit very large and grows abundantly; very rich flavor, tarty, a splendid berry for jelly, pies and for canning.

CUTHERBERT—Leading late variety, all over the country. A very rank grower. Very productive. Fruit large and of good quality. If you want a good all round late red raspberry, plant the Cuthbert.

HAYMAKER—A purple cap, not so dark as Columbian or Shaffer, and larger and firmer than either of those varieties; never crumbles, and stands up well in shipping. Sample crates have been shipped to distant points with entire satisfaction. It is a berry to grow for either home use or market.

ST. REGIS—Raspberries for four months. The new everlasting variety. It gives a crop of fruit all summer and autumn fruiting on the old canes in generous quantities until late in August. But this date berries begin to ripen on the young canes and continue until late in autumn. Berries are a bright crimson of large size, and of surpassing quality, rich, sugary with full raspberry flavor. It succeeds upon all soils, whether light and sandy or cold heavy clay and the canes are absolutely hardy.

BLACK CAPS

CUMBERLAND—The largest of all the black caps; coal black berries; very firm and quality of the very best; excellent shipper. Bush a strong grower, stocky canes and unusually prolific. Mid-season.

GREGG—One of the most valuable varieties of the black cap family; fruit larger than Mammoth Cluster, but not quite so good in quality; ripens some days later; hardy, a vigorous grower and great yielder.

NEW LOGAN—Here is the berry we have been seeking for years. As large as Green, earlier than Cumberland, and more productive than either. Resists drought perfectly and holds up well during the entire season, being far superior to Cumberland in that respect. More hardy in winter and less susceptible to disease than Cumberland. We are replacing our plantation of Cumberland with the New Logan and the King of Cliffs. These two varieties have been thoroughly tested in this vicinity for a number of years and have held up to expectations in every case.

KING OF CLIFFS—Imported from Illinois to this vicinity, but we can see no difference in this from the New Logan. Our supply of plants of these two varieties will be limited.
BLACKBERRIES

We grow our blackberry plants from root-cuttings, and in this way get plants with plenty of fibrous roots, which make sure the growing of the plant. In fruiting patches of blackberries there will spring up many plants from the root, and these are the plants that are usually dug up and sent out to the trade. They have but few, if any fibrous roots, and are much more apt to die when planted, and will not make the growth after planting that the plants will when grown from root-cuttings.

BLOWER—Originated in the celebrated small fruit belt of Chautauqua County, N. Y., where it has been thoroughly tested for several seasons. Claimed to be the hardiest, most productive, the finest quality and to bring on the market the highest price of all blackberries. Has produced 2694 berries on one bush, 2720 quarts on one-third acre. Large size, jet black, good shipper, best quality, unequaled productiveness are the main characteristics of this splendid new sort.

ELDORADO—A valuable new variety; fruit medium size, jet black, melting, sweet and rich, plant hardy and very productive.

SNYDER—Extremely hardy, enormously productive, medium size, no hard, sour core, half as many thorns as Lawton or Kittatinny, and they are nearly straight and short; exceedingly productive.

TAYLOR—One of the largest blackberries grown. Very productive, and as hard as the Snyder.

LUCRETIA DEWBERRY—The best of the blackberry family. Berries are far larger and better than any blackberry; of unequalled excellence; sweet and luscious throughout, of brightest glossy black color. Its trailing habit renders it less liable to winter kill. Propagates from the tips. Plant in rows six feet apart and plants three feet apart in the row.

CURRANTS ARE HEALTHY

The currant is one of the most reliable of small fruits. They mature just before raspberries and can be used either raw or cooked. Being hardy, they do not winter kill, are easy of cultivation and require little care. They can be grown in any good garden soil. The market is never over-supplied. Prune out dead wood, and mulch heavily. If currant worms appear dust with hellebore.

BLACK NAPLES—Very large, black; rich, tender and excellent for jellies and wine; very productive.

CHERRY—Very large deep red; rather acid; bunches short, plants erect, vigorous and very productive.

PAY—Color deep red; great bearer; stems longer than Cherry, and berries hold their size to end of stem better. Quality first class; not quite so acid as Cherry; the best of all the red currants.

PERFECTION (Red)—This truly wonderful new currant has both large size and extra good quality. Perfectly healthy, a vigorous grower, and in fact an extra fine red currant in every way. Widely advertised all over the country.

WHITE GRAPE—Very large, yellowish white. The finest of the white sorts. Very distinct from White Dutch, having a low spreading habit and dark green foliage. Very productive.

WILDER—Very large; bright red and attractive; a splendid market sort; not so acid as most. Bush very productive; large bunches; ripens rather early; fruit keeps well.
DECIDUOUS TREES

NUT TREES

CHESTNUT (American Sweet)—A valuable native tree, useful and ornamental; timber is very durable, and possesses a fine grain for oil finish. Nuts sweet, or delicate flavor, and are a valuable article of commerce.

WALNUT (Japanese Sieboldi)—Perfectly hardy here, rapid grower, handsome form, innumerable leaves; bears young and abundantly; one of the finest ornamental trees. Nuts produced in clusters; resembles Butternut in shape and quality; smaller with smooth and thinner shell. It is worthy of extensive planting.

Also Black Walnut, English Walnut, Pecan, etc.

ALDER

IMPERIAL CUT LEAF—Of stately, graceful growth, having deeply cut foliage. Vigorous and very hardy. Attains a height of about 20 feet.

AMERICAN CRAB

BECHTEL’S DOUBLE FLOWERED—One of the most beautiful of the many fine varieties of flowering crabs. Tree of medium size, covered in early spring with large, beautiful, double fragrant flowers of a delicate pink color.

From a distance the flowers have the appearance of small roses. A great acquisition and certain to become very popular as soon as it is known. Blooms when quite young.

BEECH

PURPLE LEAVED (Purpurea)—A most elegant lawn tree of striking appearance. Early in the season the foliage is deep purple, later changes to crimson, and again, in the fall, to a dull purplish green. Forty to fifty feet when fully grown.

CATALPA

The Catalpas flower in July when few varieties are in bloom, and are therefore desirable. The blossoms are large and quite fragrant. Larger heart-shaped, yellowish green leaves. Very effective, tropical looking lawn trees.

BUNGEI (Chinese Catalpa)—A species from China of dwarf habit, growing only from three to five feet high. Foliage large and glossy; a shy bloomer. Tops grafted on tall stems it makes an effective umbrella-shaped tree.

ELM

AMERICAN—A very large, rapid growing native tree with broad, spreading and drooping head. Very valuable for shade or timber. Hardy and succeeds well on most any soil, even adapted to low, wet black soils.

EUONYMUS

E. AMERICANA—6-8 feet. Yellow. May. This is a native variety, quick growing, deep green leaves with attractive red fruit in the fall.

HORSE CHESTNUT

WHITE FLOWERING—Decidedly the finest variety of this family. Makes a beautiful tree of regular outline. Exceedingly hardy and free from all diseases. Covered in May with magnificent white flowers tinged with red. Forty to fifty feet when fully grown.

MAPLE

The vigorous growth, fine form, hardiness, freedom from disease, and adaptability to all soils, renders the maple one of the best of trees for the purpose of shade. It has few equals for the street or park.

NORWAY (Platanoides)—Large, compact habit, and broad, deep green shining foliage. A stout, vigorous grower. One of the best for the street or park. Forty to fifty feet when grown.

SCHWEDELLI—A beautiful variety of Purple Leaf Norway and crimson color, which changes to purplish green on the older leaves.

SILVER LEAVED OR WHITE—Foliage bright green above and silvery underneath. An exceedingly rapid grower, and makes a large tree.

WIER’S CUT LEAVED—Grows rapidly, and the shoots are so slender and drooping that it has a decidedly graceful appearance. The leaves are deeply and delicately cut. A large tree if undisturbed, but will stand severe pruning, and so may be easily adapted to small places.

MOUNTAIN ASH

EUROPEAN—A more desirable variety than the American, being of finer growth and form. In blossoms during the early spring, after which the bright scarlet berries are formed in clusters. Twenty to thirty-five feet when fully grown.

POPLARS

Poplars are desirable where rapid growing varieties are wanted, and they are also very distinct and striking.

CAROLINA—Of compact habit. A very rapid grower. A desirable tree for the seashore and for our large cities, where escaping gas kills most shade trees. Fifty to sixty feet.

LOMBARDY—From Italy. Remarkable for its erect, rapid growth, and tall, spiny form. Of great value for planting with other trees to break the average height and form. Fifty to seventy-five feet.

SYCAMORE

As an ornamental tree for large grounds, or as a shade tree for street planting, this has no superior. It is a rapid grower, attains a large size, and presents a striking combination of majesty and gracefulness. Tree is heavy and not subject to ravages of insects.

TULIP TREE

A very large native tree. Pyramidal habit, with broad, fiddle-shaped leaves. Tulip-like flowers. Also Dogwood, Flowering Thorn, Ash, Flowering Peach (red and white), Flowering Cherry, Oaks, Salisbruria, Willows, European Linden or Basswood, etc.

MULBERRY

TEA’S WEEPING—Perfectly hardy, forming a natural umbrella-shaped top or head; foliage handsome and ornamental for the landscape. Also Weeping Willows, Japanese Weeping Cherries, etc.
EVERGREENS

Every lawn, park, etc., should have at least a few of these beautiful specimens to give the bit of color that is needed to set off the rest of the planting. They are especially valuable as backgrounds against which to group other trees and plants with beautiful colored leaves and branches.

Our Evergreens are exceedingly well rooted and the more rare varieties are taken up with a ball of earth on the roots. We never advise planting Evergreens in the Fall. We have recently added a line of the very rare and beautiful varieties, all of which are perfectly hardy, unless noted.

ARBOR VITAE

AMERICAN—A native variety, valuable for hedges. Stands shearing well.

HOVEYI—Compact, dense and conical with light yellowish green foliage.

GLOBOSA—Globe headed Arbor Vitae. Grows in a round globular form, very dense.

LUTEA (George Peabody)—Golden yellow, the entire season; grows in a pyramidal shape.

PYRAMIDAL—Grows in a beautiful pyramidal shape. Heavy, dark green foliage; the best evergreen for cemetery purposes obtainable.

FIR

BALSAM OR AMERICAN SILVER—A very regular, symmetrical tree, assuming the conical form, even when young; leaves dark green above and silvery beneath.

JUNIPER

IRISH—a small tree or shrub of conical shape, very erect and dense. Desirable for cemeteries.

PFITZERIANA—One of the finest of the Juniper family. Graceful spreading branches, graceful in shape and fine in foliage.

SABINA—Of more spreading form, used much in rockeries.

SWEDISH—Similar to the Irish but more hardy.

VIRGINIA GLAUCA—A beautiful and graceful tree with cedar like foliage of a distinct silvery hue. The Blue Cedar, extra fine.

PINE

SCOTCH—A fine, robust, rapid growing tree with stout erect shoots and silvery-green foliage.

AUSTRIAN OR BLACK—A bust growing sort. Leaves long, stiff, dark green. Makes a large spreading tree.

WHITE—A native tree with light silvery foliage. The varieties of pines are especially valuable when tall windbreaks are desired. They are more rapid growing than most other evergreens.

MUGHO (Dwarf Mountain Pine)—A very broad spreading variety, yet always retains a symmetrical shape. Fine for planting on stony banks, slopes, etc. Grows 6 to 8 feet high.

PONDEROSA (Bull Pine)—A hardy and beautiful western variety with extra long needles.

RETINOSPORA—JAPAN CYPRESS

OBTUSO NANA—A dwarf form seldom growing over a foot high. Suitable for boxes or vases. Very rare.

OBTUSO NANA AUREA—A taller growing variety with odd yellow foliage.

PLUMOSA OR PLUME LIKE RETINOSPORA—A beautiful tree having flat, featherly foliage of a light green color; stands shearing well.

PLUMOSA AUREA OR GOLDEN CYPRESS—The most popular of all golden evergreens. Has soft plume-like golden foliage which is particularly bright in the spring.

PISTIFERA FILLIFERA—An odd variety having drooping, thread-like branches.

OBTUSA—Beautiful, soft green, flat foliage.

OBTUSA GRACILIS—A neat, attractive and graceful variety with green foliage.

SPRUCE

COLORADO BLUE SPRUCE—A most beautiful variety discovered and disseminated from the Rocky Mountains; it is the rarest blue of any evergreen; very distinct in foliage and growth; fine, compact habit. In great demand as a lawn tree throughout the eastern states where fine specimens are established proving it the best of all evergreen trees for the lawn.

HEMLOCK—Delicate, dark colored foliage, and drooping branches. Good for lawn and also makes a good hedge.

NORWAY—Of large and lofty appearance. Well adapted for large enclosures, and stands pruning well when used for hedges. It is exceedingly picturesque and beautiful; very popular and deservedly so. We supply hundreds of these for Christmas every year.
ORNAMENTAL SHRUBS

In Shrubs we pursue the same policy as we do in fruits, viz.: to offer only those which we have known to succeed and those which we consider as hardy in this latitude. We test many new ones each year as they are offered and if they meet our requirements and offer it for sale. We now have a business in landscape work that requires thousands of shrubs each year. We will prepare planting plans and estimates when desired. Our shrubs will be found especially well rooted as our soil produces an abundance of fibrous roots.

ALTHEA OR ROSE OF SHARON

The Altheas have a well-deserved popularity. They are free growers, and not particular as to soil. They bloom in August and September, when but few other sorts are in bloom. They attain a height of six to ten feet. The leaves can furnish double or single in a variety of colors.

BARBERRY

THUNBERGI—A most interesting and valuable shrub. Habit dwarf and spreading but delicate and shapely. Blooms in May, are white and a profusion of scarlet berries. Autumn foliage is brilliant.

BUDDLEIA VEITCHIANA

BUTTERFLY BUSH OR SUMMER LILAC—One of the most desirable Summer flowering shrub-like plants, beginning to bloom in July. The flowers are of a pleasing shade of violet mauve, and at first appear as cylindrical spikes, which under liberal cultivation, are from 12 to 15 inches in length by 3 inches in diameter; it succeeds everywhere and flowers freely the first season planted, and is always admired. Tops die back to the ground in winter.

CALYCANTHUS OR SWEET SCENTED SHRUB

Blooms in June, and at intervals through the summer. Flowers of a rare chocolate color; rich foliage. The wood and blossoms have a peculiarly agreeable flavor. Three to five feet high when fully grown.

CORNUS

VARIEGATED LEAF—The flowers are bright yellow and are borne in clusters in early spring, before the leaves appear. The foliage is beautifully variegated with white. Makes small shrub.

SIBERICA—Dark green foliage, pale on underside. Blossoms in early summer with numerous flat-toped clusters of creamy white, followed by fruit of light blue or bluish-white. Branches red blood, very attractive shrub.

DEUTZIA

CRENATA—Double white flowers tinged with rose. Blooms the middle of June. Five feet high when fully grown.

GRACILIS—A graceful and charming shrub with pure white flowers. Blooms the middle of June. Two feet high when fully grown.

LEMOINE—An intermediate growing form with beautiful white flowers in clusters, covering the entire bush and blooming earlier than the other varieties.

PRIDE OF ROCHESTER—One of the finest varieties, producing large double white flowers, the back of the petals slightly tinged with rose. It excels all of the older sorts in size of flowers, profuseness of bloom and vigorous habit. Blooms early in June.

EUONYMUS

RADICANS-VARIEGATED—A handsome Japanese variety, growing almost as a vine instead of a shrub, trained on a wire for a short distance; very low growing and extremely suitable for a low border. The leaves are variegated white and green, remain on almost all winter and are very striking.

FORSYTHIA

FORTUNEI—Growth upright, foliage deep green, flowers bright yellow. One of the best early flowering shrubs, the flowers appearing before the leaves. Hardy. Four to eight feet.

FRINGE

PURPLE—Also known as Purple Mist, Smoke Tree, and Smoke Plant. Covered during midsummer with loose panicles of curious hair or fringe-like flowers, giving it a mist-like and novel appearance.

WHITE—A superb shrub, attaining a size of from ten to twenty feet. Has a compact, roundish form, large glossy leaves, and drooping racemes of pure white flowers. Blossoms in May and June. An entirely different plant from the above.

HONEYSUCKLES

MORROWI—A spreading shrub with attractive white flowers, with brilliant red berries in the fall.

PINK TARTARIAN—A well known shrub; flowers light pink, which appear in May.

RED TARTARIAN—Similar, but deep pink or red.

WHITE TARTARIAN—Like the preceding, but has white flowers.

HYDRANGEA

ARBORESCENS GRANDIFLORA—A grand addition to summer flowering hardy shrubs dwarfing the show of others in July and August by the magnitude and profusion of its flower heads. The flowers are, in a large way, similar to the familiar “Snowball” in appearance, and are so conspicuously white and imposing that whether as single specimens, as cut flowers or in groupings, their presence is predominant.

PANICULATA GRANDIFLORA—Is absolutely hardy; thrives in all soils; grows rapidly and blossoms profusely. Flowers are pure white, afterward changing to pink, and are borne in large pyramidal clusters, often more than a foot long and six to eight inches in diameter. Begins to bloom early in August, and continues in bloom for several weeks. Wherever known, it is concealed to be one of the finest flowering shrubs cultivated. It is equally valuable for planting singly or massing in beds. We heartily commend it to all lovers of the beautiful. It will give great satisfaction. Attains a height of from three to five feet. Should be headed in every spring. Can be furnished in bush or trained into an upright tree form.
JAPAN QUINCE
One of the best known shrubs in cultivation. Very ornamental in early spring, as its bright, scarlet flowers completely cover the branches before the leaves are formed. Makes a good hedge.

KERRIA
JAPONICA (Globe Flower)—A slender branched shrub, with bright green bark, growing 4 to 5 feet. Tall, single bright yellow flowers from July till fall. Very valuable.

VARIÉGATED LEAF—A dwarf form with very beautiful green leaves edged with white. Single yellow blossoms coming out at the same time the leaves come out in the spring. Habit drooping and spreading. One of the very best for low borders. Attains about three feet high at maturity.

LILACS
Lilacs are too well known to need an extended description. They are hardy and free blooming.

CHARLES X—A strong growing sort; large, loose clusters of purple flowers; an improved variety of the foregoing.

CHINESE WHITE—Growth similar to Persian, but blooms near white.

PURPLE—Blossoms early; abundant; reddish purple and fragrant.

PERSIAN—Attains a height of from four to six feet; small foliage; flowers bright purple. A native of Persia and a decided acquisition. Also White Persian.

NAMED—We can also furnish the best varieties of double and single in grafted sorts.

PRIVET
Used chiefly for hedging, but the varieties we describe deserve prominent positions in the lawn as highly ornamental shrubs.

CALIFORNIA—Of great value as a hedge, and of such positive beauty as to be attractive when grouped with other shrubs. When planted singly it forms a very compact, dense, upright shrub, of medium size. The leaves are so glossy as to have the appearance of having been freshly varnished. The foliage hangs on until late in the winter, making it nearly evergreen.

IBOTA (Chinese Privet)—A valuable new shrub, native of China and Japan. Flowers large, white, very fragrant, produced in great profusion; leaves long and shining; one of the hardiest of the Privets and distinct. A charming shrub which will be prized for its fragrant flowers, as well as for its handsome foliage. More hardy and taller growing than the California.

SPIREA
The varieties which we catalogue are exceedingly fine and interesting shrubs. They are hardy, easily grown, and as they bloom at different periods one may have flowers all summer by planting the entire list.

ANTHONY WATERER—A new dwarf compact-growing shrub. Blossoms in broad, flat heads of beautiful deep red color. A perpetual bloomer.

ARGUTA—A slender dwarf form growing 3 to 4 feet high. Blooms early in May, and forms a beautiful mass of snowy-white flowers.

BILLARDI—Blooms nearly all summer; rose-colored; fine feathery plume.

BILLARDI ALBA—White flowers, large clusters and bush grows 4 to 5 feet tall, similar to Billardi, but white.

CALLÓSA ALBA—Dwarf. Of similar habit to the Anthony Waterer, but flowers are white.

CALLÓSA ROSEA—Desirable because it blooms nearly all summer. The flowers are rose-colored, borne in panicles. A very free grower.

PROEBELS—Dwarf, 2 to 3 feet. Flat heads of crimson flowers from June to September. Extra fine.

PRUNIFLORA (Bridal Wreath)—The old-fashioned double flowered Spirea. Blooms very early, the long slender branches being covered nearly their entire length with small double flowers. Foliage a beautiful shiny green.

THUNBERG'S—A Japanese species of small size, with narrow linear leaves, and small white flowers; one of the best dwarfs.

Mock Orange

VAN HOUTTEI—The finest of all Spireas, a most charming and beautiful shrub; having pure white flowers in clusters. extraordinarily profuse in bloom, and the plant is a vigorous grower and very hardy.

SNOwBERRY

WHITE—A very well known shrub with small, pink flowers and large, white berries that hang on the plant through part of the winter.

VULGARIS—Red-fruited or Indian currant. A shrub of very pretty habit. Foliage, flowers and small fruit; fruit purple and hangs all winter.

SYRINGA OR MOCK ORANGE

GRANDIFLORA—Foliage bright green; tall growing pure white orange-like flowers in June.

GOLDEN LEAVED—A small shrub of positive and striking beauty. The foliage is golden yellow, and retains its lovely color through the entire season. When set with other shrubs the contrast is very pleasing. White flowers. Blooms in June. Very hardy.
VIRBURNUMS OR SNOWBALLS

**OPULUS** (High Bush Cranberry)—Eight to ten feet high; foliage lustrous green, changing to rich copper; blossoms in May with white flowers in flat-topped clusters, followed by scarlet fruit.

**PLICATUM OR JAPAN SNOWBALL**—Handsome plicated leaves; globular heads of pure white neutral flowers, early in June. It surpasses the common variety in several respects. Its habit is better, foliage much handsomer, flowers whiter and more delicate. One of the most valuable flowering shrubs.

**STERILIS** (Common Snowball)—A popular shrub. Makes a large bush. Bears balls of pure white flowers in June.

WEIGELIA

Of Japanese origin, producing in June and July superb, trumpet-shaped flowers of various colors, from the purest white to the richest red; very ornamental in the fall.

**CANDIDA**—Is of vigorous habit, an erect grower becoming in time a large sized shrub; flowers pure white and produced in great profusion in June and the plants continue to bloom during the summer.

**EVA RATHKE**—New. One of the best of the Weigelas, foliage lustrous green, changing to a vigorous habit and flowers. Blooms several times during the season, bearing freely well-shaped, large crimson red flowers.

**VARIEGATED LEAVED**—Leaves bordered with yellowish white, making the bush very conspicuous the entire season. Pink flowers blooming in June. A very desirable shrub.

HARDY CLIMBING VINES

Ornamentals of this class are so hardy, so easily grown, and so beautiful that they deserve greater attention than they receive. No artist can produce pictures equal to the wealth of beauty displayed by the elegant wistaria, the graceful honeysuckle, or the charming and magnificent clematis when in the glory of full bloom, and there is nothing in art that will in any degree compare with the gorgeous hues of the Ampe-lopsis after it assumes its brilliant tints.

**AMPELOPSIS VEITCHII**

**BOSTON IVY**—Leaves a little smaller and more ivy-like in form than foregoing. Overlapping each other they form a dense sheet of green. The plant requires a little protection the first winter until it is established, but after that it may be safely left to care for itself. It grows rapidly and clings to the surface of even a painted brick wall with great tenacity. Foliage changes to crimson scarlet in autumn.

**ARISTOCHLIA**

**DUTCHEMAN’S PIPE**—A rapid growing vine, with magnificent foliage, ten to twelve inches in diameter, and curious pipe-shaped, yellowish-brown flowers.

**HONEYSUCKLE**

**CHINESE TWINING**—A well known vine holding its foliage nearly all winter. Blooms in July and September and is very sweet.

**HALL’S JAPAN**—A strong, vigorous evergreen variety, with pure white flowers changing to yellow. Very fragrant; covered with flowers from June to November.

**MONTHLY FRAGRANT**—Blooms all summer. Flowers red and yellow. Very sweet.

**WISTERIA**

**CHINESE PURPLE**—One of the most elegant climbing vines known, and a very rapid grower after it gets thoroughly established, sometimes making twenty feet of wood in a single season.
VILLE DE LYON—Flowers large, of a beautiful bright velvety red, very free flowering and continuous bloomer. The best red Clematis that we know of.

PANICULATA—A great novelty from Japan. One of the most desirable, useful and beautiful of hardy garden vines, a luxuriant grower, profuse bloomer, with fine foliage. Flowers medium size, very fragrant, produced in the greatest profusion in late summer.

RAMONA—A new American seedling Clematis. It is a free and perpetual blooming variety; both on the old year’s growth and also on the wood the current year; the color of the flower is a deep sky blue, and very attractive; the size of the flower is larger than any variety we ever saw, very many flowers running from five to seven inches in diameter.

HEDGE PLANTS

AMERICAN ARBOR VITAE—Forms a very handsome ornamental hedge of fairly dense growth.

BARBERRY, Japan Quince and Rugosa Rosa—All make fine untrimmed hedges.

NORWAY SPRUCE—With careful pruning may be kept low and in good shape, and grown in this shape is highly ornamental.

PRIVET, California or Ibota (Chinese)—Are the leaders in hedges.

SCOTCH PINE, Austrian Pine, American Arbor Vitae—All well adapted for planting in belts for windbreaks.

ROSES

We carry one of the most complete lists of Roses, including all the new leading varieties which give promise of success. So many new Roses are constantly being introduced that we cannot list all of them. We list only the long tried and the very best of the new sorts.

NEW AND RECENT INTRODUCTIONS

FLOWER OF FAIRFIELD (New)—The really everblooming Crimson Rambler long sought by rose growers. It carries the crimson splendor of the type from spring even into November; commencing to bloom on the first young, red shoots and adding size and brilliancy with its growth; an important acquisition.

BABY RAMBLER—A dwarf (bush, not climbing) form of Crimson Rambler, and furthermore, everblooming. Will bloom continuously throughout the summer if planted out-of-doors. Has the same bright crimson color as the Climbing Crimson Rambler, and blooms in clusters of 20 to 40 flowers at one time on plants of fair size. It is one of the best red roses for bedding and is going to be just as popular and as extensively planted as the climbing form has been. May be grown in pots and bloom with ordinary treatment from one year’s end to another. The best rose novelty of recent years. It is perfectly hardy. White and Pink Baby Ramblers, similar to the above in every way except in color.

FRAU KARL DRUSHKI—The white American Beauty. A new, white hybrid perpetual rose. This is an ideal hardy white rose, a healthy, vigorous grower, large, perfect in form, snow white in color, very free flowering. Large, field grown plants.

SOLIEL D’OR (Golden Sun)—The most unique rose in cultivation, being the first of a new race. A strong, robust grower, with straight branches, and heavy, deep green foliage. The color of a fully expanded flower is extraordinary and is not found in any other variety in cultivation—a blending reddish-gold, orange-yellow, forming a combination that is well described when the rose was named Golden Sun, and no description can do justice to the peerless beauty of this wonderful, new, hardy yellow rose. It will prove hardy in all sections of the country. Wherever shown this rose has won all first prizes. It has but one drawback to the propagator’s mind, and that is that it does not succeed well on its own roots, and we therefore offer it in strong, low budded plants, two year old stock only.

LOS ANGELES—Brilliant flame-pink, toned with coral and shaded with translucent gold at the base of the petals. Buds are long and pointed, expanding into flowers of great size.

OPHELIA—Light salmon-pink-flesh. shading to yellow at the base of the petals. Blooms are borne in profusion all season; exquisite in the bud. Many rose-growers consider this the best of its color. One of the most desirable varieties.
HYBRID PERPETUAL ROSES

With the care noted above these Roses will produce a succession of bloom from June till frost, produce new wood constantly and the bloom is assured. They are perfectly hardy and will endure the winter unprotected; but will produce a great abundance of early flowers if somewhat protected. They should be severely pruned before the buds start.

AMERICAN BEAUTY—This valuable rose is of American origin, being introduced by a Washington florist. It is equally valuable for forcing or open air culture. The flowers are a deep crimson color, of very large size, and the most fragrant of its class. It is a continuous bloomer. Should be protected in winter.

ANNE DE DIESBACH—Brilliant, crimson, sometimes shaded with bright maroon. A superb golden sort; fragrant; one of the handsomest and best.

BARONNE DE BONSTETTEN—Rich, dark, red, passing to velvety maroon; highly fragrant. Very double.

CLIO—New. Flesh color shaded in center with rosy pink. Flowers large, of fine globular form; handsome foliage, one of the handsome new roses.

GENERAL JACQUEMINOT—Brilliant crimson, large and very fine, one of the handsomest and most showy roses of this color. Beautiful in the bud; semi-double when full blown. Of fine, free growth; a universal favorite.

LA FRANCE—Delineate silvery rose; very large and full; an almost constant bloomer, equal in delicacy to a Tea Rose; the most pleasant fragrance of all roses; a moderate grower; semi-hardy.

MADAME GABRIEL LUIZET—A magnificent pink rose; has often been awarded the first premium at rose exhibitions; very large, and possesses a pleasing fragrance. Known as Hardy La France which it resembles.

MAGNA CHARTA—Bright pink, suffused with carmine; very large, full and fragrant, with magnificent foliage. A fine bloomer.

MARGARET DICKSON—Of magnificent form; white, with rose flesh center; petals very large, shell shaped, and of great substance; fragrant, a fine variety; foliage very large, dark green.

MARTHY P. WILDER—New, color cherry carmine; continues in bloom after other varieties are out of flower; the finest H. P. rose yet introduced.

MRS. JOHN LAING—A seedling from Francois Michelon; soft pink; large and of fine form produced on strong stems; exceedingly fragrant; one of the most valuable varieties for forcing, and flowers continuously in the open ground. Most beautiful rose of recent introduction.

PAUL NEYRON—Deep rose color; good foliage; by far the largest variety in cultivation. Probably the best bloomer in the entire list. An especially satisfactory variety to plant.

PRINCE CAMILLE DE ROHAN—Deep velvety crimson, large, moderately full. A splendid rose.

ULRICH BRUNNER—Raised from Paul Neyron. Brilliant cherry red, a very effective color; flowers of fine form and finish, carried well upon the plant; petals of great substance; plant vigorous, hardy, and resists mildew. One of the best varieties for forcing and open air culture. A strong growing variety.

We also have a fine line of Hybrid Tea Roses. These are not quite as hardy as the Hybrid Perpetuals, but much more hardy than the Teas. With a banking of dirt, which is the best way to protect them they can easily be kept through the winters successfully. These are true ever-bloomers and will bloom constantly all season. Among the best which we have are the following:

GRUS AU TEPLITZ—Bright crimson.

GEN. McARTHUR—Crimson scarlet.

J. L. MOCK—Carmine changing to pink.

KAISERIN AUGUSTA VICTORIA—Cream.

KILLARNY—Flesh pink.

KILLARNY—Double white, glistening white.

KILLARNEY BRILLIANT—Brilliant pink.

LADY HILLINGDON—Apricot yellow.

LA FRANCE—Bright pink.

MAD. CAROLINE TESSTOUT—Satin rose.

MRS. AARON WARD—Indian yellow.

MME. CAROLINE TESSTOUT—Brilliant shining pink.

RADIANCE—Carmine red.

SUNBURST—Cadmium yellow, orange center.

CLIMBING ROSES

BALTIMORE BELLE—Fine, white with blush center; very full and double.

CRIMSON RAMBLER—This wonderful rose has been thoroughly tried and in all situations has proved all that could be claimed for a new introduction, and it has far surpassed all that was hoped for it. As a climbing or running rose it has no equal. The foliage is rich, dark green, the growth rapid and diverse, but its great beauty is when the plant is covered with a profusion of the brightest crimson, partly doubled flowers which remain on a long time, thus prolonging the term of its magnificent. By far the best climbing rose.

CLIMBING AMERICAN BEAUTY—New. This new climbing form of the famous pink Rose, so long the American favorite for cutting, is as lovely and fragrant and deeply pink as the bush form. The hardy climber blood with which it is crossed, gives healthy, perfect foliage and a strong climbing habit of growth; the abundant bloom being prime before the June snow of the bush type.
**DOUGHTY PERENNIAL PLANTS**

The habit of using hardy plants that do not have to be taken up each fall is spreading rapidly and the demand for them is constantly increasing. To supply that demand we have been increasing our plantings of them each year. We now devote a considerable space to Perennials and can offer the very best there is on the market. We list the leading hardy plants below, but we have many others in small supply and are constantly adding to this list each season.

**ANEMONE JAPONICA (Wind Flowers)**

**ANEMONE JAPONICA** (Wind Flowers)—A most valuable class of hardy plants suitable for edging, massing or single specimens. They grow rapidly 2 to 3 feet and are profuse in bloom, gaining strength and beauty each year. The blooming period extends from August till mid-November, the large open flowers furnishing abundant cut-flowers and a brilliant field display.

**AUBERG—**Purest white, with yellow center.

**QUEEN CHARLOTTE—**Flowers semi-double, are broad and perfectly formed of that pleasing shade of pink found in La France rose.

**WHIRLWIND—**Excellent double white flowers, 2½ to 3 inches across.

**AQUILEGIA OR COLUMBINES**

The Columbines are one of the most elegant and beautiful of hardy plants, and usually make themselves at home in any hardy border. Their period of flowering covers late spring and early summer months. As a whole they are most important part of the hardy garden, and should be grown in quantity by every lover of old-fashioned garden flowers.

**COERULA (Rocky Mountain Columbine)—**Bright blue and white long-spurred flowers.

**CHRYSANTHA—**Yellow, long-spurred flowers.

**CAMPANULA (Canterbury Bells)**

**CALYCANTHEMA ("Cup and Saucer")—**Most popular form of Canterbury Bells. Cup-shaped flowers 3 inches long, set in saucer-like calyx 3 to 4 inches across; entire flower of one color. Very productive. We offer three separate colors, blue, pink and white.

**CHRYSANTHEMUMS**

Large flowering, hardy, old-fashioned. The fragrant old-fashioned kind that you have seen alongside the farm house and in the old-fashioned garden. Yellow, white, pink, red and Indian red.

**WHITE DOUGHTY—**A beautiful white flowered cluster rose, as free and expressive as its pink rival, the Dorothy Perkins. The vines are a sheet of white during their blooming season and are especially valuable because of the rarity of good white Climbing Roses.

**YELLOW RAMBLER—**A new climbing rose of class and habit of the famous Crimson Rambler; flowers medium size, cup shape, nearly full, sweet scented; blooms in large clusters; color very light yellow; tender; not a very good bloomer. Also Blue Rambler, Dr. Van Fleet and others.

**MOSS ROSES**

We can furnish Moss Roses in white, pink, red.

**RUGOSA ROSES**

For an untrimmed hedge and for planting in masses in shrubbery the Rugosa Roses are unsurpassed. They have the finest foliage of all Roses; their large and abundant single pink or white flowers are lovely, and the large and showy red fruit that follows the flowers make them very attractive until severe freezing weather comes in the winter.

**COREOPSIS (Grandiflora)**

A beautiful hardy border plant that grows 15 to 18 inches high and produces its bright golden yellow flowers in great profusion the entire season. Beautiful masses and a favorite for cutting.

**DELPHINUM (Larkspur)**

**BELLADONNA—**A magnificent new Larkspur, surpassing every other variety in delicacy of color and freedom and continuance of bloom. Flowers are an exquisite shade of turquoise-blue, commencing to show in June and continuing until frosts.

Campanula, Canterbury Bells
ALBERT VICTOR—Deep blue.
CANARY BIRD—Falls creamy white, uppers light canary-yellow; medium sized flowers.
CELESTE—Falls bright blue, uppers delicate grayish blue; all having a lavender effect.
CHERION—Pinkish, falls streaked with red, nearest red Iris.
DARIUS—A pleasing shade of yellow, falls blue.
FLORENTINE ALBA—Very early, large white.
HONORABLE—Golden yellow standards, falls rich crimson brown.
IVORINE—Very large, extra early white.
JOHAN DEWITT—Standards bluish violet; falls deep violet purple veined with white.
MAD. PAQUETTE—Reddish purple.
PALLIDA ALBERT VICTOR—Very large late light lavender blue. Exceptionally fine. Tall.
ORIENTALIS SNOW QUEEN—An exquisite hardy Iris; flowers of a snowy whiteness, large and well formed, produced in great abundance. Foliage light and graceful. A gem for flower border or waterside, 2 to 3 feet high.
IRIS SIBERICA—Purplish blue, 3 feet high, very desirable. June.
IRIS PSEUDO ACORUS—Bright yellow. May and June. Does best in wet places.
JAPAN IRIS—Finest of all the Iris family. The flowers are of immense size, from six to eight inches in diameter, and of the most beautiful and delicate shades. They are perfectly hardy, and flower in great profusion during June and July. A well established plant gives a dozen or more flower stalks two to three feet high, each stalk producing two to four enormous blooms. Order by color only, Royal Purple, Mottled Blue, Lavender, White.
HARDY POPPIES

Among the most welcome flowers, that glorify the early spring and summer are the big glowing, nodding Poppies.

**PAPAVER ORIENTALE**—The brilliant "Oriental Poppy," with large and flaming flowers, two year.

HARDY PHLOX

No class of hardy plants is more desirable than the Perennial Phlox. They will thrive in any position and can be used to advantage in the hardy border, in large groups on the lawn or planted in front of belts of shrubbery, where by judicious pinching back and removing faded flowers, a constant succession of bloom may be had until frost. Except the dwarf species, all Hardy Phlox are admirably adapted to cutting. We offer a select list of strong field grown roots covering all shades and colors as: La Vague, Sunset, F. G. Von Losburg, Eclaireur, Lothair, Joan of Arc, Richard Wallace, Peach Blossom, Pantheon, etc., over twenty varieties.

SHASTA DAISY

Large flovered improved hybrids.

**YUCCA (Adam's Needle)**

**FILAMENTOSA**—A stately foliage and flowering plant equally imposing in solitary or group plantings, always conspicuous. The broad sword-like foliage is evergreen; while mid-summer shows great erect branching stems bearing a showy display of pendant creamy-white bells.

BULBS FOR SPRING PLANTING

**CANNAS**—Best French.

**CALADIUMS** (Elephant Ear).

**DAHLIAS**—In a variety of colors.

**GLADIOLUS**—These are among the most showy and brilliant of all bulbous plants. All colors and combinations. Our stock is of Groff's Hybrid seedlings.

**HEMEROCALLIS**, or Lemon Lily—Yellow.

**TIGER LILY**—Spotted, red, orange and black.

**LILIES**—We carry some of the rare sorts as the Gold Band Japanese Lily, Spectosum Album and Rubrum, etc.

BULBS FOR FALL PLANTING

We carry a complete stock of fall bulbs such as Hyacinth, Tulips, Crocus, Narcissus, etc., imported from Holland each fall. These must be planted in the fall to succeed. Prices on application in fall.

**PHLOX**

**LYCHINS**

**VISCARIA, DOUBLE RED**—Form a dense tuft of evergreen foliage, and in June sends up spikes of handsome, double, deep red, fragrant flowers, remaining in perfection for six weeks. June and July.

**MONARDA DIDYMA**

**CAMBRIDGE SCARLET**—Bushy, coarse-leaved plant, growing about two feet high; covered with round, full heads of red flowers. The Monardas are well known as "Bergamot," "Oswego Tea," "Mint," etc., on account of the delicious fragrance of their leaves when crushed, this particular variety being an exceedingly showy scarlet and one of the finest blooming hardy plants of any color.

**LINUM**

**PERENE**—Foliage is fine and graceful, with flowers shaped like those of Phlox. Blooms all summer. Clear delicate light blue.

ORNAMENTAL GRASSES

**EULALIA GRACILIS UNVITATA**—This plant is of most graceful habits and is very useful for decorating purposes. The best ornamental grass in cultivation.

**EULALIA JAPONICA ZEBRINA** (Zebra Grass)

—Leaves crossed every two or three inches by a band of yellow half an inch wide.

**EULALIA JAPONICA VARIEGATED**—Long, narrow leaves, striped with green and white.

**PYRETHRUM HYBRIDUM**

**PAINTED DAISIES**—Red, white and pink, blooms in June and July; a most beautiful, hardy plant. Long season of bloom.

**PLATYCODON**

**GRANDIFLORUM** (Balloon Flower)—Blooms constantly from July until late in September; flowers large, bell-shaped, of a deep shade of blue. An extremely rapid grower, making a dense branching bush two to three feet high.

**ALBA**—Same as Grandiflorum, except white.

**PERENNIAL PEA**

Red, pink and white. July till frost.
**The Fremont Nursery**

**BY EXPRESS OR FREIGHT, PURCHASER PAYING CHARGES.**

**SPRING 1924**

There is still a great shortage in the supply of nursery stock in the country, probably less than 50 per cent of a normal supply except in a few items.

We find that our prices last season were low r than many firms we have made reduc-

PERENNIALS
The Peonies are Desirable

SINGLE PEONIES—Have you ever seen them? We have been offering our Single Blush Peony for a number of years and we have yet to hear of a person who has not been completely charmed with it. We were unable to obtain this variety anywhere and therefore propagated a supply of it from a specimen in our grounds which has been there for over 40 years. It is a single flower, delicate flesh tint on first opening, fading to white after a few days. It has a beautiful large yellow center and is extraordinarily fragrant. It is the best blooming variety of all the Peonies we have ever seen. It can be planted in the Spring and will bloom profusely the first season and blooms every year without fail, Early.

We have now developed some deeper colors from our Single Blush and can now furnish Single Pink and Single Red. All have the same characteristics but differ only in color.

Read what one customer says about the Single Blush. We have received hundreds of letters praising this Peony in the last few years, but we continue to print this testimonial because it refers both to the peony and the Floradora Dahlia which is so in accord to what we have always claimed for them.

I want to get some more Peonies, the ones I got from you have done so well. The SINGLE BLUSH I got from you three years ago has over 60 blooms on it now (it had two fine blooms the first season) and is much admired by everyone. I had some of the Dahlias got from you at the Flower Show in Sarnia last Fall and people were raving about them. So many thought they were some new kind of Chrysanthemums. The FLORADORA is the best bloomer of all I ever saw.

MISS M. M'GLASHAN.

The following are our most popular sorts, but we have a number of others in smaller supply.

Mons. Jules Elie—Extra choice variety; massive; double, chrysanthemum shaped; superb, clear pure pink.

OFFICINALIS ROSEA (fl. pl.)—Beautiful, clear pink; double; extra early and fine.

OFFICINALIS RUBRA PLENO—Rich, deep crimson; very early and one of the brightest of all dark colored varieties.

ROSE DAMOUR—Soft flesh pink, very fresh color. Extra. Large flower.

RUBRA TRIUMPHANS—Very large bloom, brilliant crimson.

SOLFATARE—Large, compact; sulphur white, crown ripe, borders milky white. Extra.

SOUVENIR DE L’EXPOSITION UNIVERSELLE—Very large full blooms of exceptional fine form; color clear cherry red with silvery reflex.

TENUIFOIA OR FRINGE LEAF—A beautiful novelty with delicate fern-like foliage. Flowers the brightest fiery red, produced early.

TRICOLOR GRANDIFLORA—Large bloom, color color soft rose with salmon center.

BERLIOZ—Enormous full globular imbricated bloom, bright currant red center tinged rose and shaded with amaranth. Very late bloomer.

CHINENSIS ALBA—White, outer petals rosy. Red stamens.

COURONNE D’OR—Late white, showing gold reflections and slight carmine tips.

FESTIVA MAXIMA—About the largest and undoubtedly the most popular Peony of them all. High built flowers borne on long, stiff stems; the purest white, inner petals slightly tipped carmine.

FLORAL TREASURE—Clear, delicate pink; very double and fragrant.

HUMEI—Pure, bright, deep rose; vigorous grower; one of the best late blooming varieties.

L’ECRATANT—Broad, full flowers of purplish crimson.

MARIE LEMOINE—Dwarf, extra late, and very scarce. White, faintly tinged chamois.

M. THIERS—Rose, shaded purple.

MODESTE GUERIN—Brilliant carmine-rose, with a high and stiff center full of rosy-pink petals.
We offer a superior line of fine Dahlias, consisting of the various types, Cactus, Show, Decorative, etc. Among the best which we offer are the following:

**FLORODORA**, an old variety but still one of the best. In fact, we consider it the most satisfactory Dahlia we have ever grown. Cactus Type, rich deep velvety red. An early and prolific bloomer.

**AIGIR**, fine bright red cactus variety.

**COUNTESS OF LONSDALE**, another cactus, having a beautiful combination of salmon and pink.

**C. W. BRUTON**, Decorative type, bright yellow.

For sixty years The Fremont Nursery has been growing and handling nursery stock. These years of experience are at your disposal.

Our business is, almost exclusively, done directly with our customers. We would like to have you favor us with a trial order.
